Art Unit: 1774

1. This application contains claims directed to the following patentably distinct species of the claimed invention: a) wherein the base material is a paper sheet, b) wherein the base material is a plastic film, c) wherein the base material has a metal layer formed on the ink receiving layer side and d) wherein the base material has a metal layer formed on the side opposite the ink receiving layer.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 11-16 and 20 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1774

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

During a telephone conversation with Ms. Dudek on October 26, 2001 a provisional election was made with traverse to prosecute the invention of species d, claim 19. Affirmation of this election must be made by applicant in replying to this Office action. Claims 17 and 18 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

2. Claims 11-16, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mukoyoshi et al. (4,960,638).

The reference discloses a recording sheet comprising a support base and a recording layer (see the abstract). The base may be a metal foil (col. 2, lines 3-13) and may have an anchor coating between it and the recording layer to improve adhesion (col. 4, line 67 to col. 5, line 2). While the reference does not give the particulars of the anchor layer, such layers are well known in the art and are generally formed of polymeric materials that will aide in adhering the support to the ink receptive coating. Thus, this layer would form a transparent support material between the metal foil and the ink receptive layer of the laminate. The reference is also silent concerning the

Art Unit: 1774

maximum specular glossiness of the medium, either printed or unprinted. Limitations to maximum specular glossiness of the medium are considered to be inherently met by the reference because applicants' specification indicates that these values may be achieved through the use of a metal foil layer and because it is well known to print on such recording sheets using multi-colored recording inks.

3. Claims 11 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mukoyoshi et al. as applied to claim 1 above, and further in view of Laurash et al.

Laurash et al. teach that it is known to make a printable support into a label by providing pressure sensitive adhesive and a strippable layer on the backside thereof (see col. 5, lines 33-36 and line 63 to col. 6, line 4). In view of this teaching, it would have been obvious to one of ordinary skill in the art to apply an adhesive back layer on the medium of the primary reference in order to form a label.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pamela R. Schwartz whose telephone number is 703-308-2424. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly, can be reached on (703) 308-0449. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
